

QUALITY AND SAFETY POLICY

Ensure that the Quality and Safety Policy and the general goals set by executive management are understood, implemented and supported at all levels of the company and by all stakeholders.

Continue the reorganisation process with the precise assignment of roles and responsibilities at all levels of the organisation and with the implementation of new figures in strategic positions.

Continue with the staff training and information process aimed at increasing involvement in company dynamics, particularly with regards to health and safety.

Continue the process of analysis of data regarding “nonconformities” in order to prevent their occurrence, as well as to prevent accidents and injuries, thus reducing costs caused by a “lack of quality and safety”.

Implement processes for the continuous improvement of the company quality and safety system, client satisfaction, health and safety in the workplace, internal communications and communications with stakeholders, resource management, process indicators, and compliance with and application of current laws and regulations.

Formalise activities that influence Quality and Safety, Good Manufacturing Standards and Halal standards in order to provide objective evidence of the control and monitoring of the same through process indicators, allowing the system to be constantly improved.

Measure the suitability of, respect for and the efficiency of the company Quality and Safety system, as well as the reaching of set goals, during the Management Review with a view to continuous improvement.

Implement continuous strategies for expansion in European and International markets, pursuing a Quality and Safety Policy aimed at offering Clients high-level products and services that can fully satisfy their expectations.

Quality offered to clients takes the form of both the ability to understand and identify client expectations and criticalities in a highly accurate manner, and to guarantee clients high-quality and extremely safe products and services.

Pay ever increasing attention to the environment and to health and safety in the workplace, focusing research and development on formulas with low environmental impact that pose minimal risk to the health of workers and users, with ingredients of natural-vegetable origin, and on the reduction of packaging through the reuse, recycling and recovery of the same.

All the personnel of Allegrini S.p.A., at all levels, are responsible for the precise application of the measures contained in the Manual and in the Management and Operational Procedures referred to within.

Date: 01.07.2022
